PROFESSIONAL SUMMARY

Software developer focused on full-stack web application development. Experience designing and implementing APIs and building frontend interfaces for business applications, contributing to the development of scalable and maintainable solutions.

Experienced working with modern service-based architectures, applying software development best practices, version control, and agile methodologies to support continuous software delivery.

EXPERIENCE

Web Developer

Digital Marketing Agency

July 2025 - December 2025

- Designed and developed the agency's official website using modern web technologies, delivering the project end-to-end from development to production deployment.
- Implemented a responsive user interface optimized for multiple devices, improving accessibility and user experience.
- Structured the frontend following development best practices and clean code organization to ensure maintainability and scalability.
- Managed the website deployment and implemented basic SEO optimizations to support proper indexing and online visibility.

Freelance Full Stack Developer

Freelance

February 2024 - Present

- Developed a translation project management platform using Angular and Java Spring Boot, including cloud file handling and automated email notifications.
- Designed administrative workflows to assign users to projects and manage status transitions, enabling structured tracking of deliveries and deadlines.
- Implemented a gym management platform with subscription tracking, expiration control, and financial monitoring using .NET and SQL Server.
- Developed a library management system as an academic project, including user administration, inventory tracking, and transactional history management.
